

# Telecommunication: SMS & MMS API Provider

- All of the services are stateless and support auto scaling over k8s
  - All of the services are fully dockerized and k8s friendly
  - Here we are talking about services not workers or processes
  - We should think about Quality of Service (QoS)
- All of the components are scalable
  - No single point of failure accepted in the solution
  - There is a Log Shipment mechanism that is not included in this document
  - All of the data must stay consistent with current MySQL database
